GUIDE:
Go to
<http://code.google.com/hosting/>
and click on **Create a new project**

[+ Create a new project](#) [? Learn more about Project Hosting](#)

Search projects

Create a new project

Instantly create your open source hosting project by filling out the form below. For your project, you'll receive:

- Mercurial and Subversion code hosting
- Download/release hosting
- Integrated source code browsing and code review tools
- An issue tracker and project wiki

[Learn more](#)

Project name flex-project-1

Example: my-project-name

Project summary This is a test project

Description Some description.

GUIDE:
 Enter your project information,
 choose version control,
 choose a License and click on **Create project**

Version control system Subversion

Source code license MIT License

Project label(s)

[add another row](#)

GUIDE:
Choose the **Source** tab

 Search projects

flex-project-1

This is a test project

 Search projects

- [Project Home](#)
- [Downloads](#)
- [Wiki](#)
- [Issues](#)
- Source**
- [Administer](#)

Checkout [Browse](#) [Changes](#) [Request code review](#)

How-to: Explore this project's source code by clicking the "Browse" and "Changes" links above. x

Command-line access

If you plan to make changes, use this command to check out the code as yourself using HTTPS:

```
# Project members authenticate over HTTPS to allow committing changes.
svn checkout https://flex-project-1.googlecode.com/svn/trunk/ flex-project-1 --username [redacted]
When prompted, enter your generated googlecode.com password.
```

GUIDE:
 Click **googlecode.com password** to get the password for the version control of your project.
 Your svn url is https://flex-project-1.googlecode.com/svn/trunk/
 Your username is listed here too

Use this command to anonymously check out the latest project source code:

```
# Non-members may check out a read-only working copy anonymously over HTTP.
svn checkout http://flex-project-1.googlecode.com/svn/trunk/ flex-project-1-read-only
```

GUI and IDE access

This project's Subversion repository may be accessed using many different [client programs and plug-ins](#). See your client's documentation for more information.

Your project is using approximately 0 bytes out of 4096 MB total quota.
 New project? You can [reset this repository](#) so that svnsync can be used to upload existing code history.

 Search projects

GoogleCode.com Password

@gmail.com's googlecode.com password 

Regenerate

GUIDE:
you can see your password here

This password is used by project members when checking out or committing source code changes, or when using command-line tools to upload files to the project "Downloads" tab.

User Preferences

Privacy

- When I participate in projects, show non-members my email address as " ...@gmail.com"
- Hide updates by me from other users. [Learn more](#)

Security

- Accept @gmail.com Google Account password when using a Mercurial client. To make sure your password is safe, always use the latest client from:
 - <http://mercurial.selenic.com/downloads/>

Issue change notification

Whenever an issue is changed by another user, send me an email:

- If I am in the issue's **owner** or CC fields.
- If I **starred** the issue.

Wiki page comment notification

Whenever comments are added to a wiki page by another user, send me an email:

- If I **starred** the wiki page.

Source code review comment notification

Whenever comments are added by another user, send me an email:

- If I **starred** the review.

TortoiseSVN the coolest interface to (Sub)version control

About TortoiseSVN

TortoiseSVN is an easy-to-use SCM / source control software for Microsoft Windows and possibly the best standalone Apache™ Subversion® client there is. It is implemented as a Windows shell extension, which makes it integrate seamlessly into the Windows explorer. Since it's not an integration for a specific IDE you can use it with whatever development tools you like.

VisualSVN

Subversion for Visual Studio. Done right.
Enjoy it!

www.visualsvn.com

**GUIDE:
DOWNLOAD :]**

The current version is 1.6.15

For detailed info on what's new, read the [changelog](#) and the [release notes](#).

The current version 1.6.15 is linked against the Subversion library 1.6.16.

Please make sure that you choose the right installer for your PC, otherwise the setup will fail.

TortoiseSVN 32-Bit

TortoiseSVN 64-Bit

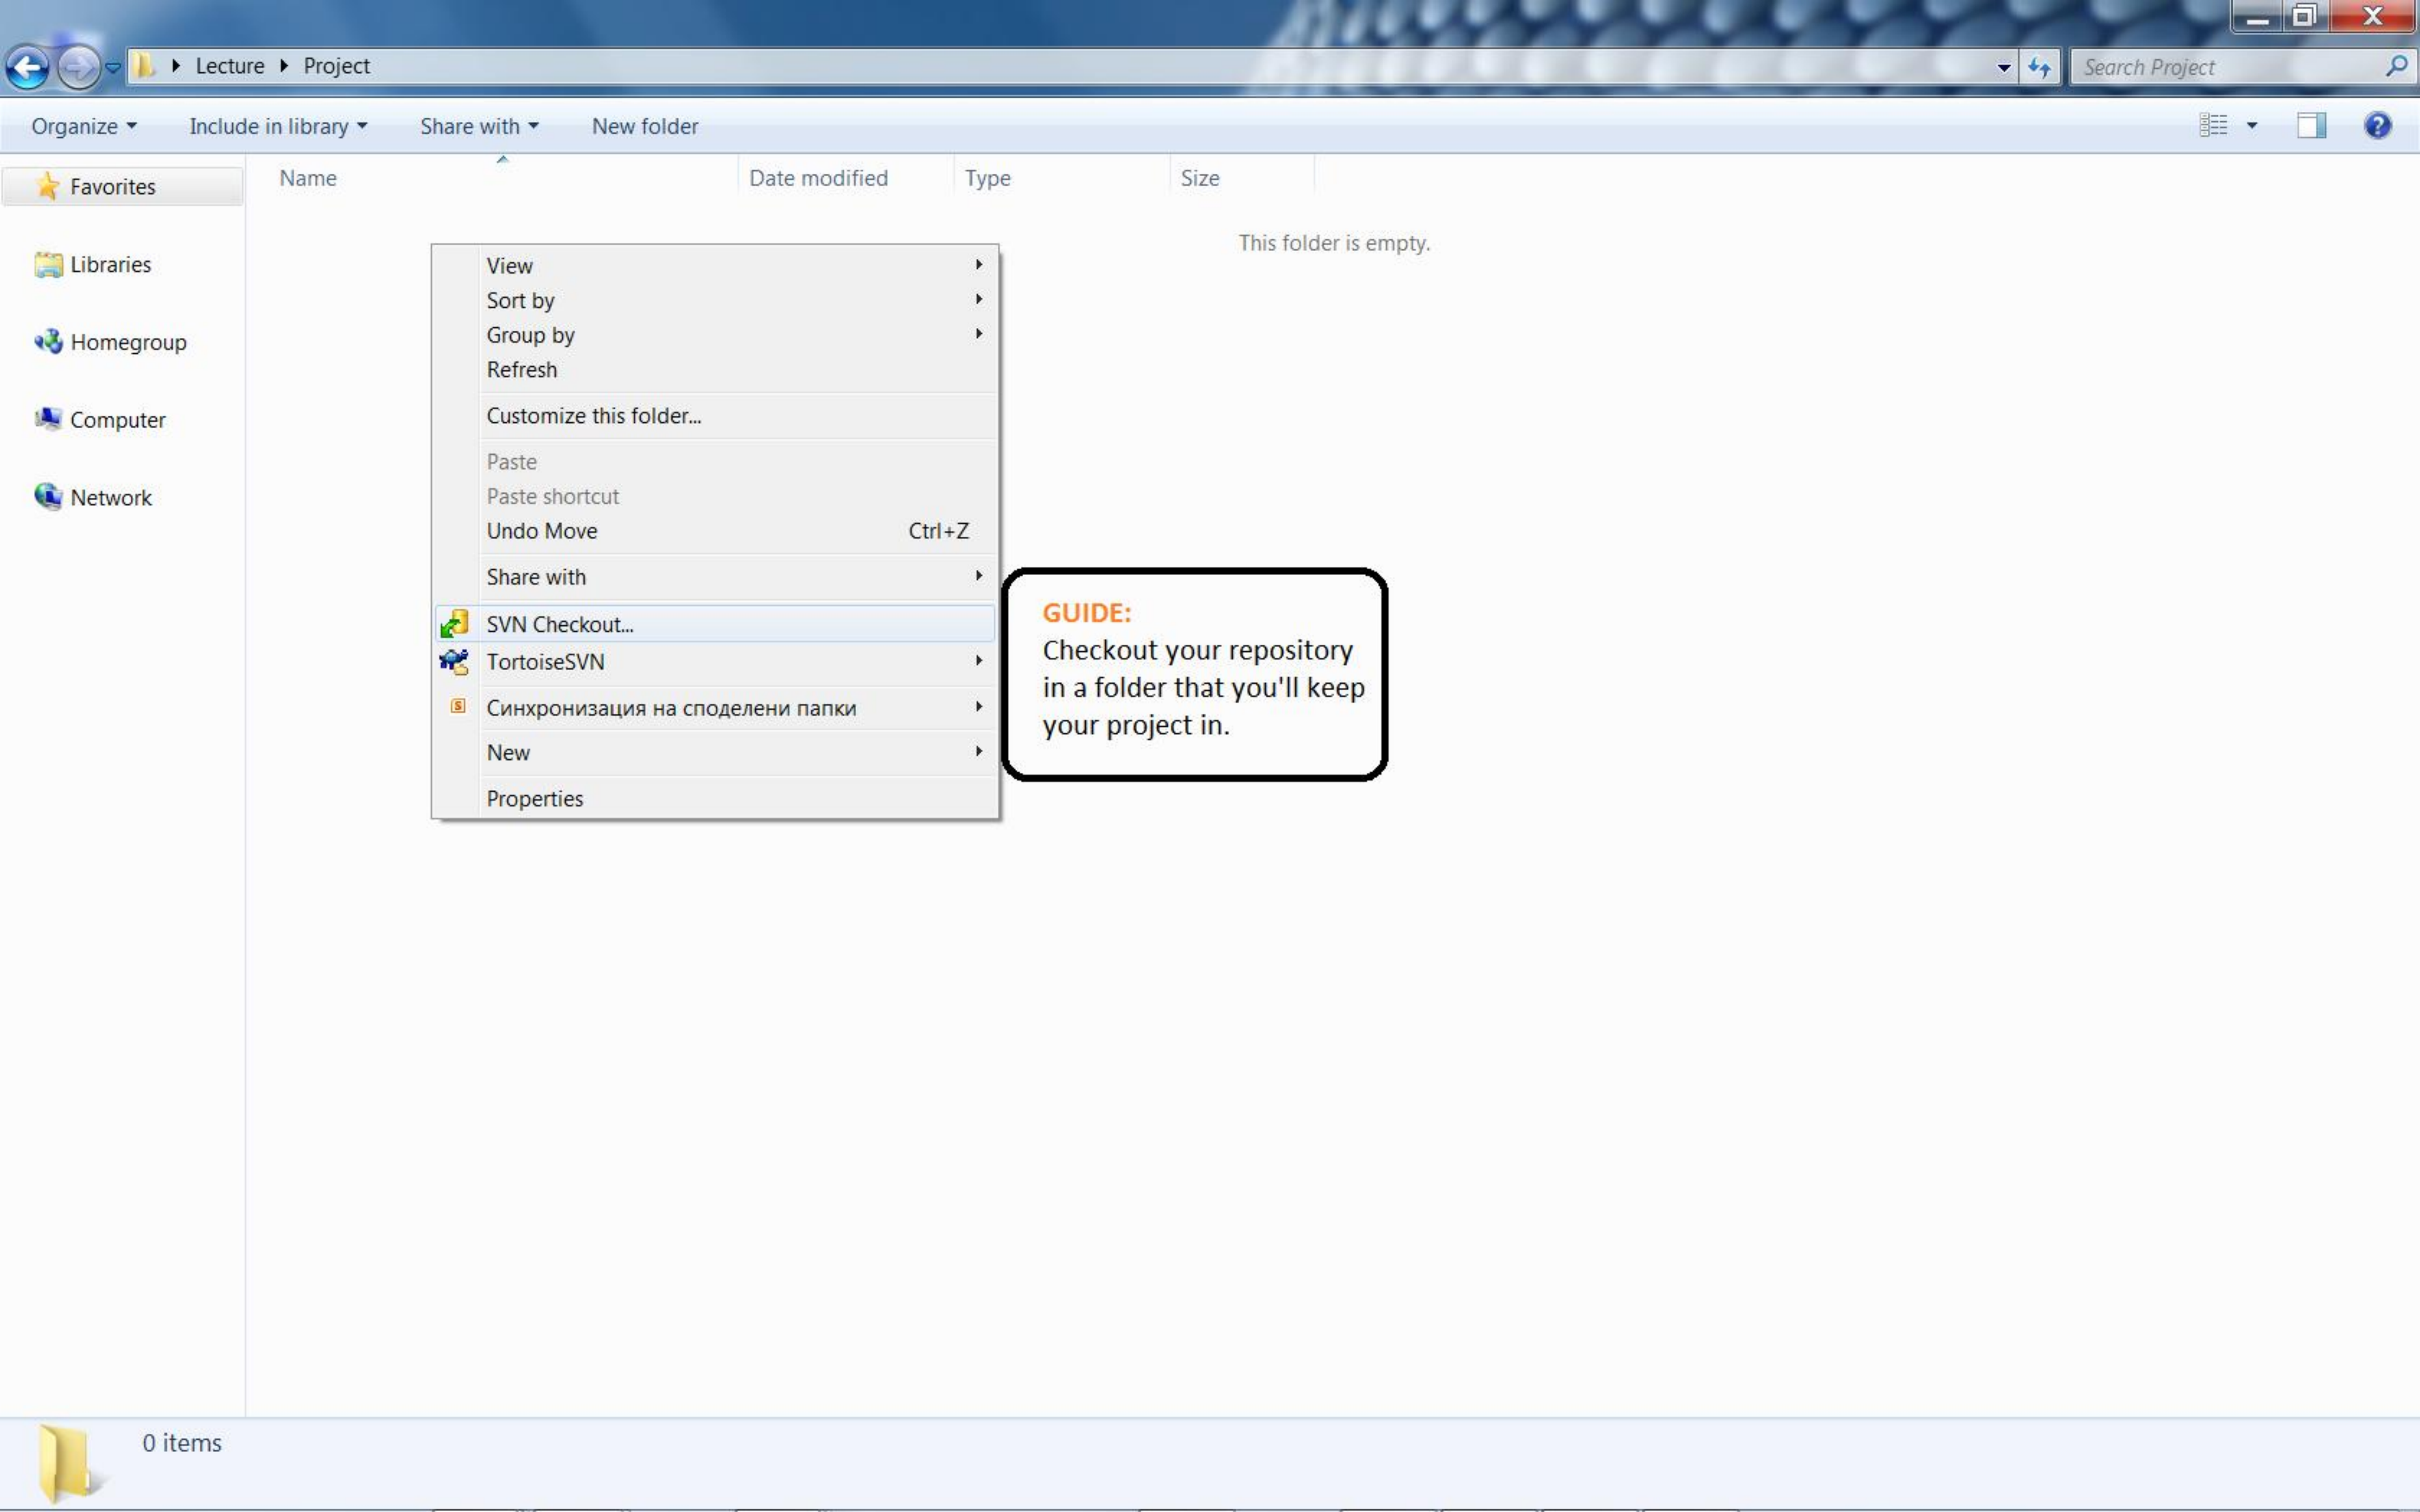

To verify the file integrity follow [these instructions](#)

Updating

If you're updating from an earlier version (pre 1.6.10), you have to run the installation twice. Just use the *Repair Install* the second time.

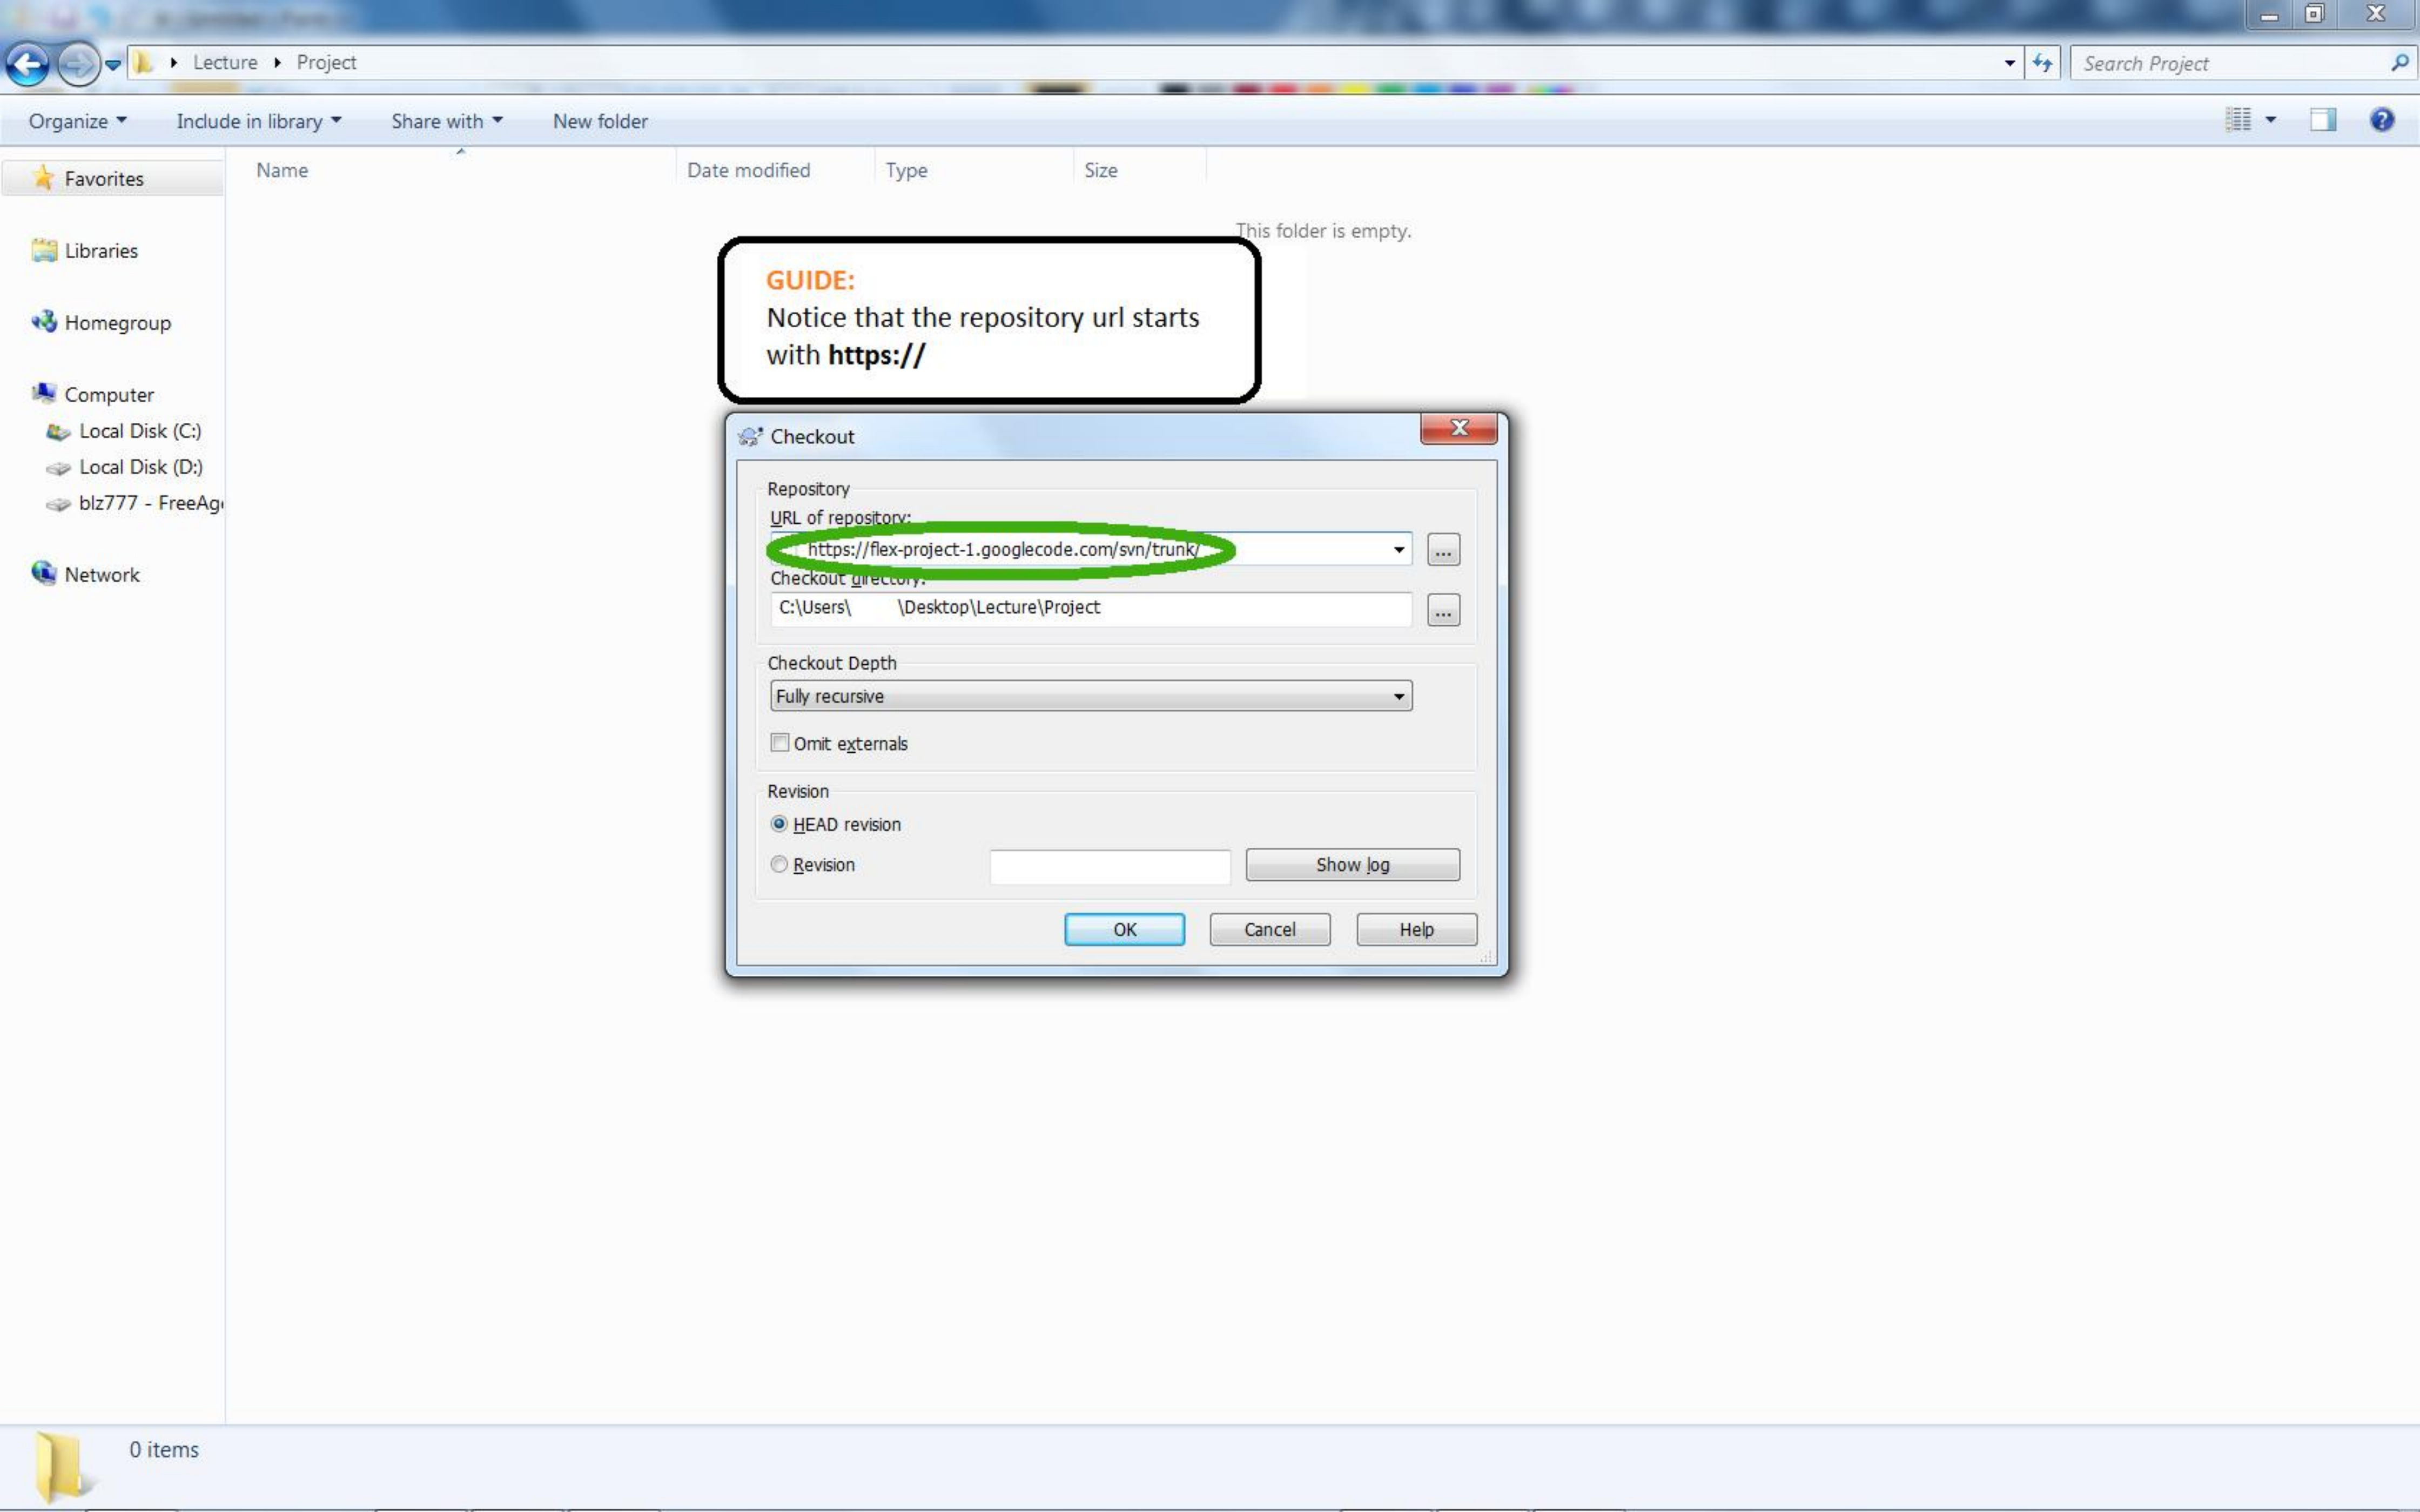

If you want to know the details about why the repair install is necessary, read [my post](#) about it.

GUIDE:
If you see this then that probably means you've successfully committed your project to the repository.

```
1 <?xml version="1.0" encoding="utf-8"?>
2 <s:Application xmlns:fx="http://ns.adobe.com/mxml/2009"
3     xmlns:s="library://ns.adobe.com/flex/spark"
4     xmlns:mx="library://ns.adobe.com/flex/mx" minWidth="955" minHeight="600">
5     <fx:Declarations>
6         <!-- Place non-visual elements (e.g., services, value objects) here -->
7     </fx:Declarations>
8     <s:Label text="Hello world!" />
9 </s:Application>
10
```

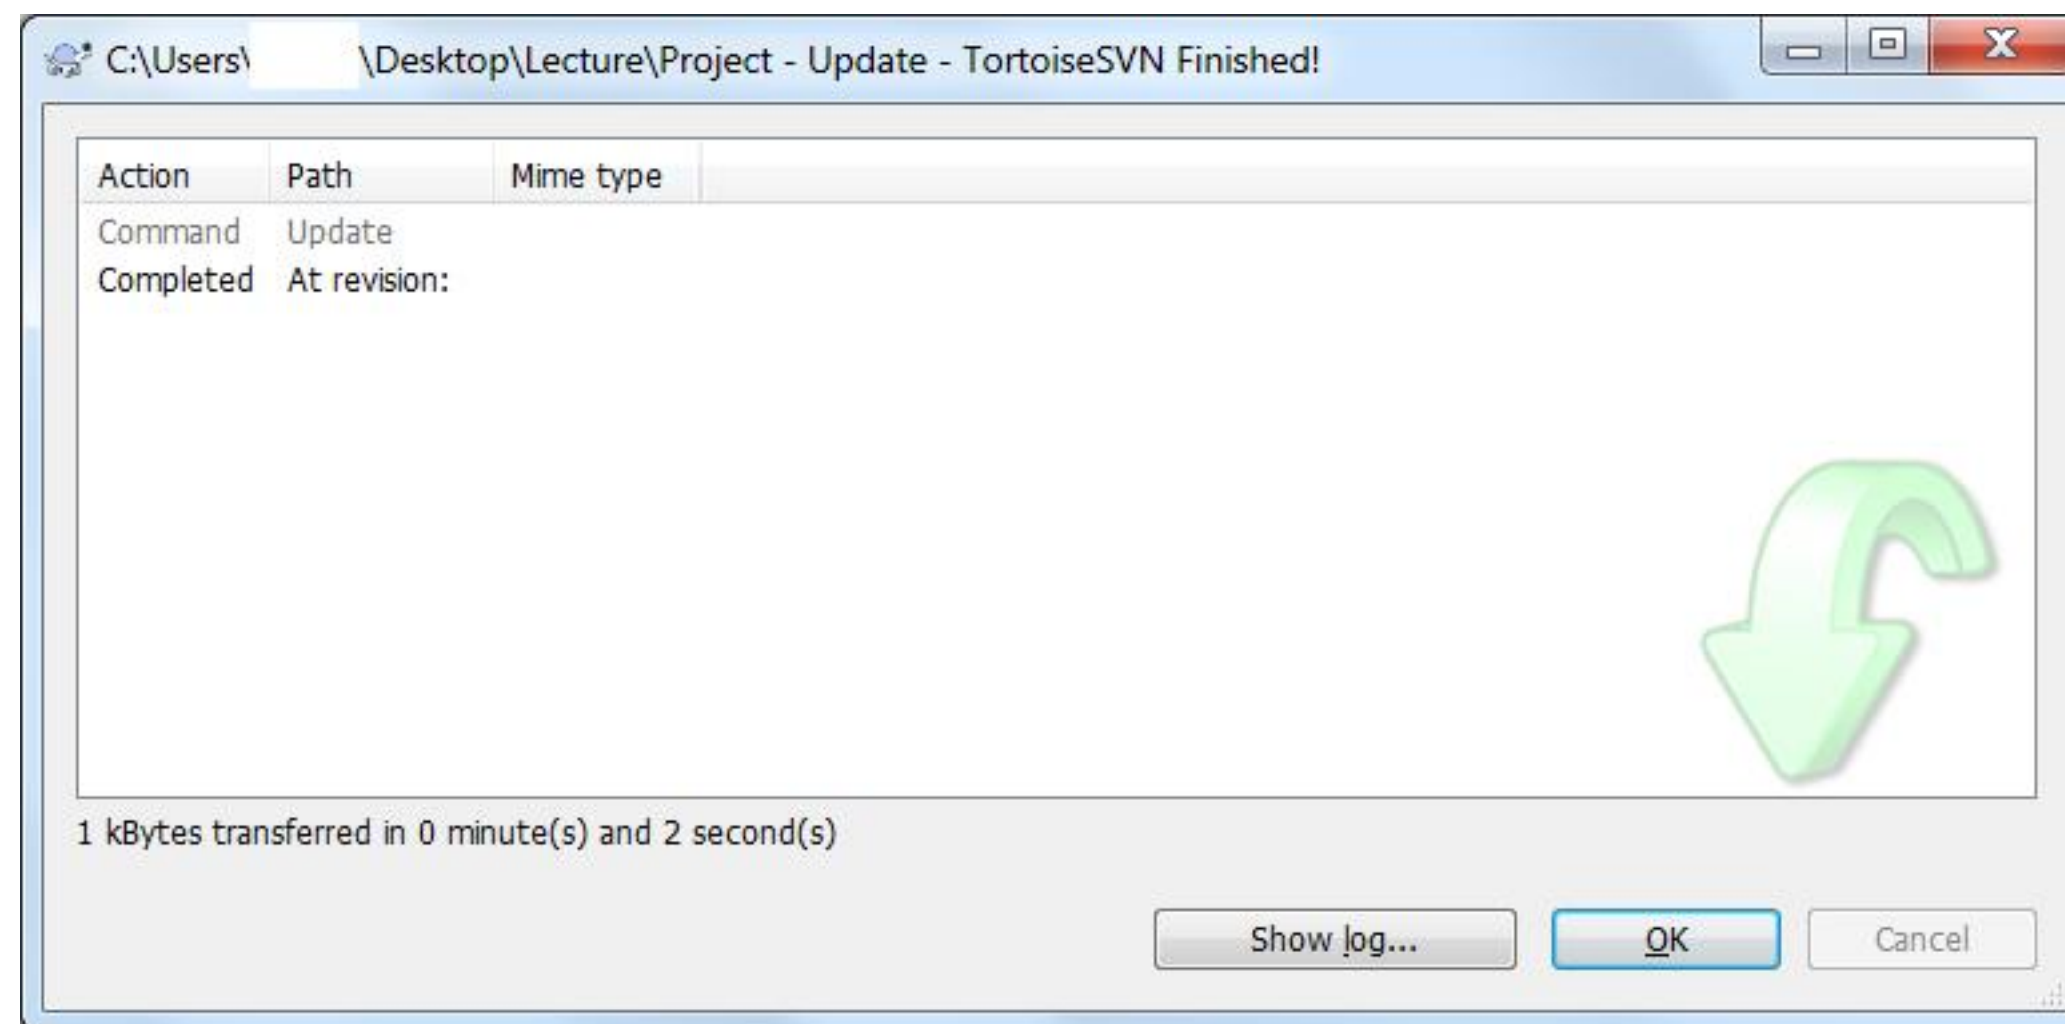

GUIDE:
Make some changes to your project. For example add a Label with "Hello world!" text :]
